

INDEX

SR No.	Project Tasks	Page No.
1.0	Introduction Of Dataset	
2.0	Task 1: Data Understanding	
2.1	Load The Dataset Using Pandas	
2.2	Display Dataset	
2.2.1	First 5 Rows of Dataset	
2.2.2	Last 5 Rows of Dataset	
2.2.3	Dataset Shape	
2.2.4	Column Names	
2.3	Identify Data Types	
2.3.1	Quantitative Data (Discrete & Continuous)	
2.3.2	Qualitative Data (Nominal & Ordinal)	
3.0	Task 2: Exploratory Data Analysis (Eda) (Use Graphs Compulsory)	
3.1	Univariate Analysis	
3.2	Bivariate Analysis	
3.3	Multivariate Analysis	
4.0	Task 3: Handling Missing Data And Outliers	
4.1	Identify Missing Values	
4.2	Handle Missing Values	
4.2.1	Mean / Median / Mode Methods	
4.3	Detect Outliers	
4.3.1	Detection Using Boxplots	
4.4	Impact Of Outliers	
5.0	Task 4: Spread Of Data	
5.1	Check Data Distribution	
5.1.1	Normal Distribution	
5.1.2	Skewed Distribution	
5.2	Calculate Statistical Measures	
5.2.1	Standard Deviation	
5.2.2	Kurtosis	
5.3	Interpret Results	

SR No.	Project Tasks	Page No.
6.0	Task 5: Automating EDA using Python	
6.1	Use Pandas and NumPy functions	
6.1.1	describe ()	
6.1.2	Info ()	
6.1.3	IsNull ()	
6.1.4	Corr ()	
6.2	Reusable Python functions for EDA	
7.0	Task 6: Regression Analysis	
7.1	Identify:	
7.1.1	Dependent variable	
7.1.2	Independent variables	
7.2	Perform:	
7.2.1	Simple Linear Regression	
7.3	Analyze:	
7.3.1	Covariance	
7.3.2	Correlation	
8.0	Task 7: Supervised Learning – Regression Model	
8.1	Split dataset into:	
8.1.1	Training data	
8.1.2	Testing data	
8.2	Build regression model using:	
8.2.1	LinearRegression (sklearn)	
8.3	Train a regression model using training data	
8.4	Validate model performance using validation data	
8.5	Build:	
8.5.1	Simple Linear Regression Model	
8.5.2	Multi Linear Regression Model	
8.5.3	Multi Linear Regression Model	
9.0	Task 8: Overfitting and Underfitting Analysis	
9.1	Explain concepts of overfitting and underfitting	
9.2	Compare training and testing errors	
9.3	Demonstrate how model complexity affects performance	

SR No.	Project Tasks	Page No.
9.0	Task 9: Classification Task	
9.1	Convert the problem into a classification problem (Example: Profit → Profitable / Not Profitable)	
9.2	Build a classification model using supervised learning	
9.3	Evaluate classification performance using:	
9.4	Accuracy	
9.5	Confusion Matrix	
10	Task 10: Model Evaluation	
10.1	Calculate and interpret	
10.1.1	Mean Squared Error (MSE)	
10.1.2	Mean Absolute Error (MAE)	
10.1.3	R ² Score (for regression)	
10.2	Compare regression and classification outcomes	
10.4	Interpret model performance
